Behavioral attention problems in school environment are frequent, even in regular students. Warned for this fact, we are arranged study the learning process in three students with behavioral attention problems. The main questions of this study are: 1) what does it happen in the learning process of those children?; 2) Do they have a progression in their learning?; 3) Can they progress under a Assisted Computer Education procedure?; 4) Can they even do it when this type of peculiar education is focused on attention abilities? The students were initially trained through educational piece of software for treatment of the attention process. The discussion about the results is made of some differential traits found in the students' learning gradual progress, after their practice with each interactive video game of the piece of software. **TOPICS + KEYWORDS:** e-Learning, collaboration, University, cultural diversity. **PREFERENCE:** Poster
